

Plot Members and Permissions

Members are players you add to your plot.

Only add trusted players! They can help build, decorate, use, or manage the plot.

Adding a Member

Stand inside your plot and use:

```
/plot add <player>
```

The player must have joined the server before.

After they are added, the plot permission editor opens so you can choose what they can do. Every click autosaves!

You must navigate to the member's page of the plot panel to change their management perms. (see the charts below to see the difference between plot permissions and management permissions!)

Removing a Member

Stand inside your plot and use:

```
/plot kick <player>
```

You can also kick members from the plot panel by clicking on the member and clicking the door icon in the bottom right of the ui.

Viewing Members

Stand inside a plot and use one of the following.

```
/plot members
/plot info
```

(Or open the plot panel and use the Members icon.)

Permission Presets

The member permission editor includes the following presets:

Preset	Good for
Visitor	Safe guests who can use doors and fight hostile mobs
Builder	Players who can build, break, and interact, but not open containers or harm animals
Trusted	Trusted players who can also interact with entities and armor stands
Full Access	Highly trusted players, similar to co-owner-style access
Custom	A custom mix of permissions (Selecting extra options will auto-select this pre-set)

Plot Permissions

You can toggle these perms separately for each player (member plot permissions), or as a whole for the plot (public permissions).

Permission	Lets the member...
Break Blocks	break blocks
Place Blocks	place blocks
Use Items	use items on blocks
Use Switches	use buttons and levers
Use Doors	use doors, trapdoors, and gates
Open Containers	open containers such as chests and barrels
Use Armor Stands	interact with armor stands
Interact With Entities	interact with non-horse entities

Permission	Lets the member...
Damage Hostile Entities	fight hostile mobs
Damage Passive Entities	harm passive mobs
Set Access Point	set homes or warps inside the plot

Public Plot Permissions

Public permissions are for the players who are not members of your plot.

You can toggle pvp for the plot under plot permissions. Doing so will make it so only the owner of the plot can damage other players.

Management Permissions

Management permissions let a member help manage the plot itself.

Permission	Lets the member...
Add Members	add new members to the plot
Remove Members	remove members from the plot
Edit Member Permissions	change member plot permissions
Edit Public Permissions	change non-member permissions

Only give management permissions to players you fully trust!!

Saving Changes

Permission changes save as soon as you click them.
